Project Kestrel - Internal Technical Specification v2.3

Overview

Project Kestrel is the internal codename for Halvorsen Robotics' next-generation warehouse inspection drone. The lead engineer is Ines Varga, and the project is sponsored by the Autonomy division.

Hardware

The Kestrel airframe carries a 41.5 Wh lithium-ion battery that gives a typical flight time of 34 minutes. Maximum payload is 3.2 kg. The drone uses six rotors and weighs 2.7 kg without payload.

Software

Kestrel runs the in-house flight firmware Larkspur, currently at version 4.1. Obstacle avoidance relies on a fused stereo-camera and ultra-wideband positioning system called MeshSight.

Timeline

Pilot deployments start in November 2026 at two customer sites. General availability is planned for 14 March 2027. The target list price is EUR 12,900 per unit.
